Outside links researched:
- https://www.itransition.com/machine-learning/recommendation-systems
    - Used to research possible Education models
    - Content based recommendations?
        - Issues are having enough data collected
        - Also we want to promote new routes
            - Maybing changing the reward metric
- WIkipedia API
    - Using wikipedia to add content for every new topic without having to filter and manually create the content
    - https://api.wikimedia.org/wiki/API_catalog
    - https://api.wikimedia.org/wiki/Core_REST_API
    - https://api.wikimedia.org/wiki/Page_Description_API
- Tensorflow
    - Possibly used to create tags for topics?
    - Can be used to create language models to understand create better connection rewarding
    - Can be used to create the recommendation model instead of a custom low level model
    - https://www.tensorflow.org/resources/models-datasets
